FRONT END LAB INSTRUCTION MANUAL

Experiment 1: Designing a Personal Website Using HTML and Basic CSS

Aim:

To design a basic personal website inspired by popular platforms such as Instagram, Facebook, Reddit, or Discord using HTML and basic CSS.

Instructions:

1. Select any popular website as a reference for the webpage layout.
2. Draw a rough wireframe showing the header, navigation bar, profile section, main content, sidebar and footer.
3. Create an HTML webpage representing a personal profile.
4. Include details such as name, profile picture, bio, posts, interests and navigation links.
5. Use basic CSS properties such as `display`, `flex`, `grid`, `margin`, `padding`, `width` and `gap` only for layout and spacing.
6. Avoid decorative styling such as colors, shadows, animations and complex fonts.
7. Test the webpage in a browser and attach its screenshot.

Experiment 2: Implementing Semantic HTML

Aim:

To modify the personal website created in Experiment 1 using appropriate semantic HTML5 elements.

Instructions:

1. Use the same webpage developed in Experiment 1.
2. Identify generic elements such as `<div>` used for different webpage sections.
3. Replace them with appropriate semantic elements wherever applicable.
4. Use elements such as `<header>`, `<nav>`, `<main>`, `<section>`, `<article>`, `<aside>` and `<footer>`.
5. Maintain the same webpage layout using the existing CSS.
6. Test the modified webpage and attach its screenshot.

Experiment 3: Creating an HTML Form Using Semantic Elements

Aim:

To create a user information form as part of the personal website using HTML forms, fieldsets and semantic elements.

Create a "Get to Know Me / Connect With Me" form where visitors can share their details and interests.

Instructions:

1. Create a form within the existing personal website or as a separate HTML page.
2. Design the form to collect basic user information such as name, email, phone number, date of birth, gender, interests and address.
3. Divide the form into relevant groups using the `<fieldset>` element.
4. Use `<legend>` to provide a title for each group.
5. Use appropriate form elements such as `<input>`, `<select>`, `<textarea>`, `<radio>` (HTML input type) and `<checkbox>` (HTML input type).
6. Use proper `<label>` elements for all form fields.
7. Use semantic HTML elements wherever appropriate and CSS only for layout, spacing and alignment.
8. Include Submit and Reset buttons.

Suggested Form Sections:

1. **Personal Details**: Full Name, Date of Birth, Gender.
2. **Contact Information:** Email Address, Phone Number, City.
3. **Professional / Academic Details:** Institution/Organization, Designation, Area of Study.
4. **Interests:** Areas of Interest (Technology, Sports, Music, etc.), Skills.
5. **Purpose of Contact:** Collaboration, Project Discussion, Networking, General Enquiry.
6. **Additional Information:** Message or Introduction.
